POND  
AN  
ALMANACK  
for the Year of our  
LORD GOD  
1689.

Being the first after Bissextile or Leap-year, and from the worlds Creation at the Spring 5692 years Compleat.

Amplified with many good things both for pleasure and profit: and fitted for the Meridian of *Saffron-Walden* in *Essex*, where the Pole is elevated 52 degrees and 6 minutes above the Horizon.

And may serve indifferently for any other place of this Kingdom.

---

C A M B R I D G E,  
Printed by John Hayes, Printer to the  
University, 1689.

## Pond 1689.

The Suns entrance into the four Cardinal Signs.

**H**e enters **Aries**, March the 9, 12 min. past 7 at night, at which time 12 degrees of  $\Sigma$  Ascends, 16 degr. of  $\Xi$  are upon the Cusp of the 10 house, 21 degr. of  $\Omega$  upon the Cusp of the 11 house, 21 degrees of  $\eta\chi$  upon the Cusp of the 12 house, 5 degr. of  $m$  upon the Cusp of the 1 house, and 5 degr. of  $\sharp$  upon the Cusp of the 2 house. He will then be in 5 degr. of  $m$ ,  $\Xi$  in 20 degr. of  $\omega$ ,  $\delta$  in 25 degr. of  $\eta\chi$ ,  $\vartheta$  in 14 degr. of  $\Sigma$ , and  $\Omega$  in 17 degr. of  $\Xi$ .

The Suns entrance into the other Cardinal Signs, viz.

He enters  $\Xi$  June 10, 41 min. past 9 at right.

He enters  $\Sigma$  Septemb. 12, 13 min. past 1 after noon.

He enters  $\eta\chi$  Decemb 11, 49 min. past 1 in the mor.

**M**arriage comes in on the 13 day of January, and at Septuagefina Sunday it is out again untill Low-sunday; at which time it comes in again, and goes not out till Rogation-sunday: thence it is forbidden untill Trinity-sunday from whence it is unforbidden untill Advent-sunday: but then it goes out, and comes not in again untill the 13 day of January next following. The

## The beginning and ending of the Terms.

Hilary Term begins January 23, ends February 12.

Easter Term begins April 17, ends May 13.

Trinity Term begins May 31, ends June 29.

Michaelmas Term begins October 23, ends Nov. 28.

A Table shewing how many years Purchase a Lease or Annuity is carried for any number of years under 30, is worth present value, at interest 6 per cent., as fix in the broadred, and bearing off the differences any Lease as being, and the true value of the Reversion after any number of years.

A Table shewing how many years Purchase a Lease or Annuity so carried

for any number of years under 30, is worth present value, at interest

6 per cent., as fix in the broadred, and bearing off the differences

any Lease as being, and the true value of the Reversion after any

number of years.

### The use and Explanation of this Table.

The first Column at the left hand sheweth the years of a Lease, or Annuity, and right against each year are the years, months, and decimal parts of a months purchase that such a Lease or Annuity is worth.

#### Example.

Suppose a Lease or Annuity to continue 18 years, and you would know how many years purchase it is worth in ready money, look in the Column of the years of a Lease, for 18 years, and against the same you shall find 10, 9, 9, which shews such a Lease to be worth 10 years,

9 months, and 9 ten parts of a months purchase.

So that the yearly rent being 12 pound, the value will be thus

10 times 12 is 120 in 9 months, is 9 in 9 parts is 0

But if you buy the Reversion of a Lease now, as suppose a Lease of 20 years continuance, and you commence

not till 5 years be past, in this and such like cases, look for the present worth of the Lease, as this of 20 years, which will be found worth 11 years, 5 months, 7 tenths of a months purchase,

then look the present worth of a Lease of 5 years, which will be found worth 4 years, 2 months, 5 tenths, take this out of 11, 5, 7 and there remains 7, 3, 3, which are 7 years, 6 months, 3 cents of a months purchase; and so much is the Reversion of the Lease of 20 years, after 5 years worth be expired.

**Akronomy** is convervant about the motions magnitudes, and distances of the Cœlestial bodies, &c. And as to its antiquity, is the most ancient of all Sciences, and although it hath beene and still is endeavour'd to be improved, yet of all natural knowledge it seems to have had the slowest improvement.

## January 1689.

1	2	3	Windy weather but mild for the season.	4	5	6	7	8	9	10	Cold frost and snow.	11	12	13	14	15	16	17	18	About this time snow.	19	20	21	22	23	24	25	26	27	28	29	30	31
---	---	---	--	---	---	---	---	---	---	----	----------------------	----	----	----	----	----	----	----	----	-----------------------	----	----	----	----	----	----	----	----	----	----	----	----	----

This Month set all kind of fruit trees and Quick-setts, sow Kernels or Stony Seeds, as also Beans, Pease, and hardy Pot-herbs, as Radish, Parsnips, Onions, Parsley, Spinage, &c. Those things which you would have to grow or bear fruit quickly, plant, sow, or cut at the increase of the moon.

Rheums and Flegm do much abound this month, therefore beware of taking Cold. It is not good to fast long; White Wine tasting is good; but use no Physician nor let blood, unless necessity constrain.

February hath xxviii days.

Last quarter the 2 day, at 11 beforenoon.

New moon the 9 day, 22 min. past 11 at night.

First quarter the 16 day, 42 min. past 3 afternoon.

Full moon the 24 day, 13 min. past 2 in the morn.

But we cannot wonder at the downness of improvement it hath had, if we consider the sublimity thereof, and those wants of such assistance as this Age enjoys: For by the help of the Telescope many things in Astronomy have been discovered which former Ages could not attain to. And so our Mete-

Inclination of  
the air.

February 1689.

M.D.

Wind wa-  
ther but mild  
for the sea-  
son.

Changeable  
weather.

Cold and  
slippy.

Frosty with  
snow.

This month set Roses with all other kind of Plants, also the Quick-siers, sow Peas, and O-  
nions, as in the former month. You may now also garden for Gil-  
let and Pot-hearts, and such like, the weather considered; Prune  
and trim all sorts of Fruit Trees,  
remove Grains or Young Trees in  
the last Quarter of the Moon, the  
being in Aries, Libra, or Scropio.

Slimy Fish, Milk and such like Meats, which do opilate and stop the Liver and Veins, and thicken the Blood are not wholesome.

# March hath xxxi days.

richly have discovered a great many Rarities by the use of the Microscope (which hath much increased Physical Knowledge) which former Apes knew nothing of, nor can we enough extol Galileo so: these his most excellent Optical inventions. Neither can I think these things only helpfull to *Epicurus's* Diffi-

## March 1689.

1	2	3 Windy with 4 cold rain or 5 snow.	6	7	8	9	10	11	12	13	14	15	16 Gleomy and 17 cold wea- ther.	18	19	20	21	22	23 Tempestuous 24 but not very 25 cold.	26	27	28	29	30	31
---	---	---	---	---	---	---	----	----	----	----	----	----	--	----	----	----	----	----	---	----	----	----	----	----	----

This month at the new moon graft, also set Quick-setts and vines, and cut your Hedges and vines already growing, which if you would not have them run out too much into binds and leaves; it is best to cut them at the wane or decrease of the moon, you may also sow all manner of garden seeds, and slip Artichokes and Sage.

Now it is good to purge and let blood, for in this month the humor is and blood increase, and gross feeding breeds gross blood, and humours; wherefore use means of good digestion, and such as afford good juice and nutriment to the body: to bear all salt things, sweet meats and drinks are commendable, and beire to eat in the morning before you drink.

# April hath xxx days.

Last quarter the 2 day, 32 min. past 9 at night.

New moon the 9 day, 33 min. past 6 at night.

First quarter the 16 day, 43 min. past 10 before noon.

Full moon the 24 day, 1 min. past 11 before noon.

26	69	
27	70	
28	71	
29	72	
30	73	

At the beginning of this month,  
when the cold winds are over, sow  
tender Seeds, as Sweet Marjoram,  
Puritan, Painted Beans, &c. sow  
also Hemp and Flax. (see Crops)  
Melons, and Cucumbers, also low  
Barley and Artichocks; bark trees  
for Tanners, clip Box, Cypress, and  
such like Shrubs; in Gardening ob-  
serve alwaies to sow dry, and  
set wet.

The use of Physick becomes  
now seasonable, as also Purging  
and Blood-letting. It is good to  
abstain from Wine, for many di-  
seases will be taken thereby to the  
ruine of many.

net Eclipses, &c. Some say that the Stars serve for nothing but to be gaz'd at, as said *Picus*, *Gassendus*, and others: but although these men in their Lives endeavoured to baffle Astrology; yet by their death they signified to all the World that it was a Science, and that of some certainty too. And to give the enemies

In this month, follow your Land for Wheat, pull up Hemp that is ripe, get Rue and Wormwood to drive away Fleas and Moths; dry Flowers in the shade and then Sun them a little for fear of corruption; perfume your house with sweet favours, and defend yourself from Rinks in the street.

Forbear superfluous drinking, but eat heartily; use cold Herbs and Meats, abstain from Physick. Perfume your house every morning with Tar, use Carduus Benedictus boiled, and drink fasting.

improbable for us to know the nature of every Star, and their influences being at so vast a distance from them. Many other objections may indeed be made against Astrology, which cannot be enumerated in this place; and to argue against antiquity and experience I think a little unreasonable.

## September 1689.

However there were not those who by arguments probable enough, to maintain Astrology against all opposers, that it is at study both commendable and usefull, and as Corden says, that it is *Astrologia Scientiarum*, but he that will still urge frivolous arguments against it, is desired to answer these queries.

As first what's the cause of the variation of the Air?  
How comes it to pass that the Sea follows the motion of the Moon? Where lies or from whence is the cause of Contagious and Pestilential diseases? Why are all the rest of the Stars fixed, and yet wandering, and differing in their heights.

## November 1689.

1	2	3	High winds but a clear Air.	4	5	6	7	8	9	10	Wet weather	11	12	13	14	15	Cold rain and snow now.	16	17	18	19	20	Very turbu- lent weather.	21	22	23	24	25	26	27	28	29	30
31	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30			
31	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30			
31	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30

Divinity will inform us that such contingencies as the mutation of the Air, Contagios and Pestilential diseases &c are the will of God, and we must all own that such things are the effects of an all-ruling Providence, which seldom acts without a secondary cause, and every Christian should own fate no farther than it is subservient to Providence.

## December 1689.

1	2	3	4	Cold weather with snow.	5	6	7	8	9	10	Gloomy but not very cold for the season	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

The use of the Table in Example.

King Henry 8 began his Reign in the year of Christ 1509, April 22. He Reigned 37 years, 10 months, and 2 days. It is since he began his Reign 180 years compleat the 22 of April this year 1689. Now to know the time since the end of his Reign, before his name standing on the right hand, you shall there find 142 years since he died, *Jas. 28.* And so of the rest.

## The Explanation and use of the foregoing Table, with some observations of *England*.

**T**he Table consisting of several Columns, is plain and easie; in the first column towards the left hand, is a Catalogue of all the Shires in *England* and *Wales*, right against each of which, under their proper Titles, are the number of Parliament Men, Hundreds, Market-Towns and Parishes contained in the same, as also the Length, Breadth, and Circumference of the Shire, with the name of the Chief Town thereof, and its Distance and Situation from *Cambridge*.

### As for Example,

I desire to know all the forementioned things, in or belonging to *Norfolk*, I look for *Norf.* in the first column (the Shires being in an Alphabetical order) and right against the same I find, 12 Parliament Men, 31 Hundr. 28 Market-Towns, 660 Parish. its length 50 mil. breadth 30, circumference 240, the chief Town *Norwich*, its distance from *Cambridge* 49 miles, and its situation from thence North East, signified by N. E. thus in like manner is to be done for any other place.

*England*, being the Chiefest and pleasantest part of *Great Britain* is trebly divided, 1. into six Circuits destined to the Itinerary Judges, 2. into 22 Episcopal Diocesses, 3. into 40 Shires; the Shires were first made by King *Alfred*, for the easier and speedy administration of Justice. This King also divided his Subjects into tens, or Tythings, every of which severally, should give bond for the good behaviour of each other; ten of the highest Tythings made the Lesser division which we call Hundreds, which name can not be derived from the number of Villages, none of our Hundreds being so large; these Hundreds are called Wards in *Cumberland*, *Westmorland*, *Durham*, *Northumberland*: in every Hundred there's

April 1689.

Constable called the Constable of the Hundred, who receives Warrants from the Sheriffs, or Justices, and dispatches them to the Constables of each Town and Village in his Hundred, for the effecting of publick businesses. To enumerate the pleiances and ornaments of England requires more room than here is allotted, therefore it may suffice to express some of her Excellencies in these verses. *wf.*

England is stor'd with Mountains, Bridges, Walls,  
With Churches, Rivers, Women beautiful,

### Of the Eclipses this Year.

This Year, there will be but two Eclipses, and those both of the Moon; they will be both visible, and total.

The first of them happens on the 2<sup>nd</sup> day of March, 1689, of the Clock at night; and is celebrated in the 15<sup>th</sup> degree of *Libra*, in the very degree of her South Node, *Saturn* will be in the Horoscope in Quadrature of *Mars* at the beginning thereof, and *Mercury* in opposition to the Moon.

The second happens on the 19<sup>th</sup> day of September, about two of the Clock in the morning; and is celebrated in 7 degrees of *Aries*: *Mercury* opposes the Moon at the time of this Eclipse also, and the two in fortunes are in Opposition. The Eclipse happeneth in the house of death, and endeth in the Angle of Quarrels.

*The Causes of Wind.*

**T**H E Causes of Winds are various; for seeing that Wind is nothing else but the continual protrusion of the Air, all those things which cause such protrusion must be the Causes of Wind; which are these, viz.

First, the Sun is the chief and general cause of winds, for by this fiery beam he rarifies the Air, especially that on which he casts his perpendicular rays, and the Air being rarified requires a greater place, and so for its enlargement drives on that which is next to it with great violence, which driving or protrusion we call wind: And that the Sun is the chief cause of wind we shall be the more assured, if we consider, the continual blowing of the East wind in the Torrid Zone, which is certainly caused by the motion of the Sun from East to West, ( his rays operating more there than in other places, because they are more perpendicular ) who drives the Air before him, with great violence, and therefore in many places of the Torrid Zone the East wind continually blows: This chief cause is either promoted or hindred by other causes; if it is promoted, the wind is more vehement; if hindred, more gentle; and note that the protrusion of the rarified Air is circularly towards all parts, but the Air in some parts is more disposed to receive or admit of this force which is sometimes in the North parts sometimes in the South parts, &c. And then the North and South Winds blow, &c. And the same cause may produce diversity of winds in diversity of Regions, for that which is almost an East wind in some places, may be more North East in respect of other places; for altho' that part is one and the same in respect of the place to which the Sun is vertical, yet in respect of others it is diverse.

A second cause of Wind are the exhalations which arise from the Earth and Sea, which being rarified do force their way through the Air, and so cause a motion or wind.

A third cause is from the rarification of Clouds and mist, whether it be by the Sun or Stars, or fiery particles contained in them.

A fourth cause of wind, is the dissolution of snow and ice, especially that which is upon the tops of mountains.

A fifth cause is the rising and various position of the Moon and Stars.

A sixth cause is the condensation, and rarification of the Air and Vapours, by any cold, or heat.

A seventh cause is the descent of clouds, by which the Air which is under, is pressed.

Q. Why the Wind blows as it were by fits, and not with the same continued force?

The reason is for that the cause exciting wind is not continual, but for the gathering together quantity of matter which may break the Air with a convenient force there is required time; and because exhalations are more abundant upon the Sea, therefore doth the wind blow there with less intermission.

Why the North and East winds are more rigid and impetuous, and on the contrary the South and West more mild and gentle.

The reason is, because the North Air is cold, and consequently more dense, the South Air in our Zone more thin, and the thinner the Air is, the less impetuous is its motion, on the contrary the more dense it is the more rigid and rough it is in its motion. The south and west winds are also much warmer than the North, and East wind, because they come from places which are

are nearer to the Torrid Zone, or way of the Sun, but these come from places that are more remote and consequently more cold, as the North Regions are. But note that the South winds are cold, dry, and impetuous in the Temperate Zone on the South side of the Equator, as the North winds are to us in our North Temperate Zone. The East wind is rigid and more intense for another cause, viz. Because it arises from the rarefaction of the Air, by the Sun, which being continually carried from East to West, the Air also drives with the greater force Westward.

*Why the Wind is greater and more frequent in New Spring and Autumn, than in the heat of Summer, and cold of Winter?*

In the Spring winds are more frequent partly because of the dissolving of Snow, especially that which is upon the mountainous places, partly because the pores of the Earth are then opened, and more exhalations are sent out: And partly because the Air and vapours are then made more thin, being by the cold of winter made dense or thick: Much rain which commonly falls a little before the Spring begins may be also the cause of Wind then; much rain and frequent exhalations are also no less the cause of Wind in Autumn, for the gentle heat of the Sun then draws up the Vapours, but those not sufficiently rarified, so they make no wind: In the heat of Summer there is commonly but little or no wind, which is for the same reason that there is but little rain at that time also. viz. The Sun then with his great heat doth too much attenuate the exhalations, not suffering them to gather together to such an abundance as is required to the generation of winds. In the cold of Winter high winds are not so frequent, because there are but few Vapours drawn from the Earth, and those for the most part condensed into snow, or else by

Pond 1689.

by reason of frost they are not to dissipate or raised as to cause wind.

3971

*Signs of Wind.*

3972 A sign of wind is when the Sun appears to be spot-  
3973 ted at his rising, or is hid under a pale cloud, or if  
3974 he appears hallow at his rising; if at his setting he  
3975 looks pale, and descends in black clouds, it is a sign  
3976 of North wind. If the Moon looks reddish, or like  
3977 Gold it is a certain sign of wind, or if there be a  
3978 circle about her, if her horn which is N<sup>o</sup> thward ap-  
3979 pears farther out than the other, it foretells N<sup>o</sup>thward  
3980 wind, on the contrary if the South horn seems farther  
3981 out, it is a sign of the South wind blowing; if the  
3982 Moon or Stars seem very bright at their rising it is  
3983 also a sign of wind. If the two little stars in Cancer  
3984 called the *Astelli*, be covered with a little cloud it fore-  
3985 tells wind, and if the N<sup>o</sup> thermot of them be only  
3986 covered, it is a sign of the North Wind; If that which  
3987 is Southward is only covered, the South wind will  
3988 blow; Also when the rain begins to cease, the wind  
3989 begins to rise, &c.
